Project Syllabus

105.173 Bayesian Statistics

Summary

The project is conducted in groups of 3 to 5 members. Starting in November, presentations of project progress will be given in the 14:30 to 15:00 time slot, lasting approximately 10 minutes each, with the schedule announced after groups are formed. A self-standing project report must be submitted at the end of the semester before the deadline. The project grade is based solely on this report, contributing to half of the VU grade, while the final exam will include questions about the project to ensure comprehension among all group members.

Groups: The **project is conducted in groups, each consisting of 3, 4, or 5 people**. In the project section on TUWEL, a `Project Groups` tab is available. There are two types of groups: `Private Groups`, for those who have already formed a group, and `Open Groups`, for students who do not know any (or enough) of their peers to form a full group (of at least 3 members). Anyone can join an open group, and I will do my best to facilitate contact among open group members.

Please register yourself to a group in TUWEL, bigger groups are preferred!

If your group experiences a reduction in members during the course and reaches a size of only 1 or 2 members, please inform me, and I will merge smaller groups to ensure no student is left alone.

Presentations: Starting in November, presentations of the current project's progress will be given by *at least one member* of one group in the time slot from **14:30 to 15:00** following the lecture portion of the VU. Each presentation should last approximately 10 minutes, allowing time for a brief discussion. The schedule for presentation sessions (at which **presence is mandatory only if your group is presenting**), including which week groups are required to present, will be announced after the groups are formed.[1] [2]

The presentation should be viewed as a "mini guest lecture." The structure and style of the presentation – whether using slides, the blackboard, handouts, etc. — are entirely up to you. Moreover, the focus should be on the current phase of the project, assuming that previous stages are already known. Only connections to previous stages that are relevant to the current solution need to be explained.

The main purpose of these presentations is to ensure that everyone is up to date with the current state of the project while facilitating the exchange of ideas and approaches between groups.

The following table contains the scheduled presentation dates for each group.

Group	Date	Group	Date	Group	Date
Private 6	04.11.2026	Private 4	11.11.2026	Open 2+3+6	18.11.2026
Private 8+10	25.11.2026	Private 9	02.12.2026	Open 5	09.12.2026
Private 7	16.12.2026	Open 1	13.01.2027	Private 2+5	20.01.2027

Project Report: **Each group** is required to submit a **self-standing project report** at the end of the semester, with every group member mentioned as an author. The sections of the report should correspond to the different stages of the project, back-referencing earlier results and/or implementations when used in later stages. The report should start with a short description of the current project task, followed by the solution, including clearly stated reasoning regarding why, what, and how this was solved. Each section should finish with a brief conclusion, potentially a single sentence. The report does NOT need to be publication-grade; concise and to-the-point writing is preferred. It should be readable from start to finish and provided as a single **PDF document uploaded** to TUWEL before the **project deadline (28.02.2027 23:59)**. The

[1] This is because the required number of sessions will then be known.

[2] The selection is made randomly.

use of language or technical fines in the report PDF creation will *not* be considered for grading; only its content will be assessed. The content, on the other hand, must be self-standing in the sense of being not misleading or easily misunderstood, with everything defined and "mathematically rigorous."

GRADING: The project **grade is based solely on the final project report** and applies to all members of a group.[3] This constitutes half of the VU grade.

Additionally, the final written **VU exam will contain a short section about the project**. The rough format of these questions will be in the form "*In ... of the project ... was to be done. How did your group solve this? Explain the reasoning for your approach.*" This format is more focused on the theory behind the project, but it also ensures that all members of a group have fully understood the project.

Feel free to reach out with any questions or for clarification. This document will be updated to incorporate not jet known information, clarifications and any additional details that may have been overlooked.

[3] Every member should participate in the project and therefore influence the final project report; however, the presentation is held by one person, whose presentation skills should not reflect (positively or negatively) on the others in the group.
